Telecommunications Terminal Equipment
for ISDN Subscribers**

**National Communications Commission

Technical Specifications for the Telecommunications Terminal Equipment for ISDN Subscribers

1. Source of law
The Specifications are promulgated pursuant to Paragraph 1, Article 44 of the Telecommunications Management Act.
2. Scope of application
 - 2.1 The telecommunications terminal equipment for ISDN subscribers mentioned in the Specifications refers to the following types of telecommunications terminal equipment for subscribers used in an integrated services digital network (ISDN):
 - 2.1.1 ISDN digital telephone set;
 - 2.1.2 ISDN personal computer adaptor;
 - 2.1.3 ISDN G4 facsimile machine;
 - 2.1.4 ISDN video telephone set;
 - 2.1.5 ISDN terminal adaptor, ISDN terminal adaptor module;
 - 2.1.6 ISDN PABX;
 - 2.1.7 Other telecommunications terminal equipment for ISDN subscribers.
 - 2.2 The Layer 1, 2 and 3 OSI protocols for the subscriber telecommunications terminal equipment are tested for the Specifications. However, the Specification does not apply to high-level OSI protocols.
 - 2.3 ISDN switch and 110/119 centralized telecommunications terminal equipment interfacing protocols are optional items for the telecommunications terminal equipment for ISDN subscribers.
3. Each of the following shall be provided in the (client test preparation information (CTPI) for application for test report to test body:
 - 3.1 System Conformance Statement (SCS);
 - 3.2 Protocol Implementation Conformance Statement (PICS);
 - 3.3 Protocol Implementation eXtra Information for Testing (PIXIT).
4. Inspection items and acceptance criteria
 - 4.1 Basic rate interface: Table 1 provides the inspection items and acceptance criteria for telecommunications terminal equipment for ISDN subscribers sold by a supplier and Table 2 provides those for the private use of subscribers.
 - 4.2 Primary rate interface (including T1 **【1.544Mbit/s】** and E1 **【2.048Mbit/s】** interfaces): Tables 3 and 4 provide the inspection items and acceptance criteria for telecommunications terminal equipment for ISDN subscribers sold by a supplier and Tables 5 and 6 provide those for the private use of subscribers.
 - 4.3 In case that the applicant applies for the inspection of either the basic rate interface or primary rate interface, only the said interface is inspected.
 - 4.4 Table 1 provides the inspection items and acceptance criteria for ISDN switch and 110/119 centralized telecommunications terminal equipment interfacing protocols (these inspection items apply to basic rate interface and primary rate interface for sale by supplier and use by subscribers), and Appendix 1 provides the communication interface data formats and test specifications. **【This inspection is optional.】**
 - 4.5 The test items for basic rate interface are provided in Appendix 2; the test items for primary rate interface (T1**【1.544Mbit/s】** and E1**【2.048Mbit/s】** interface) are provided in Appendices 3 and 4.
 - 4.6 In case that the telecommunications terminal equipment for ISDN subscribers of basic

rate interface is equipped with audio function (i.e. speech or 3.1KHz audio bearer capability), the switching between μ -law and A-law codecs shall be tested and the method of switching shall be described in the user's manual.

- 4.7 In case that the primary rate interface (T1 interface 【1.544Mbit/s】) of equipment has been approved by the competent authority in an inspection, and that the equipment supports T1 interface (1.544Mbit/s) and E1 interface (2.048Mbit/s) simultaneously, the conformance test is performed only on the physical layer, provided that the hardware is identical.
- 4.8 For the interface criteria for inspection items, the requirements of Layer 1, 2 and 3 protocols for ITU-T ISDN basic rate interface or primary rate interface shall be followed. However, for Layer 2 and 3 for the basic rate interface or primary rate interface, the conformance statement or an approval certification document issued by a foreign country may be provided instead.
- 4.9 Electromagnetic compatibility requirements
CNS 13438 shall be met.
- 4.10 Electric safety requirements
CNS 14336-1 shall be met.

Appendix 1

I. Data formats for 110/119 network communication interface

Two data formats are defined as follows for 110/119 network communication interface UI messages:

(1). ISDN switch to 110/119 centralized ISDN CPE

UI_ID	ANI	Call_Class	User_ID	ALI
1 byte Char	10 bytes Char Array	1 byte Char (S: land line telephone, P: public telephone, M: mobile telephone, R: Pager)	100 bytes Char Array	100 bytes Char Array

Note: 1. Fields of insufficient data length are filled with '\0' char.

2. Chinese texts are coded using BIG 5.

All ALI data contain 211 bytes and are transmitted in two parts via UI message; the first transmission contains 112 bytes (including UI_ID=1, ANI, Call-Class and User_ID) and the second contains 101 bytes (including UI_ID=2 and ALI).

(2). 110/119 centralized ISDN CPE to ISDN switch

UI_ID	ALI_ACK
1 byte	1 byte

Note: ALI_Ack = 1 OK; =0 Failed

II. ANI/ALI Certification test specifications for ISDN switch and 110/119 centralized telecommunications terminal equipment interfacing protocols

(I). Scope

The test specifications contain a test group of three test cases, all of which apply to the testing of BRI/PRI interface.

The implementation under test (IUT) shall be accepted in the ISDN BRA/PRA interface conformance test first.

(II). Contents

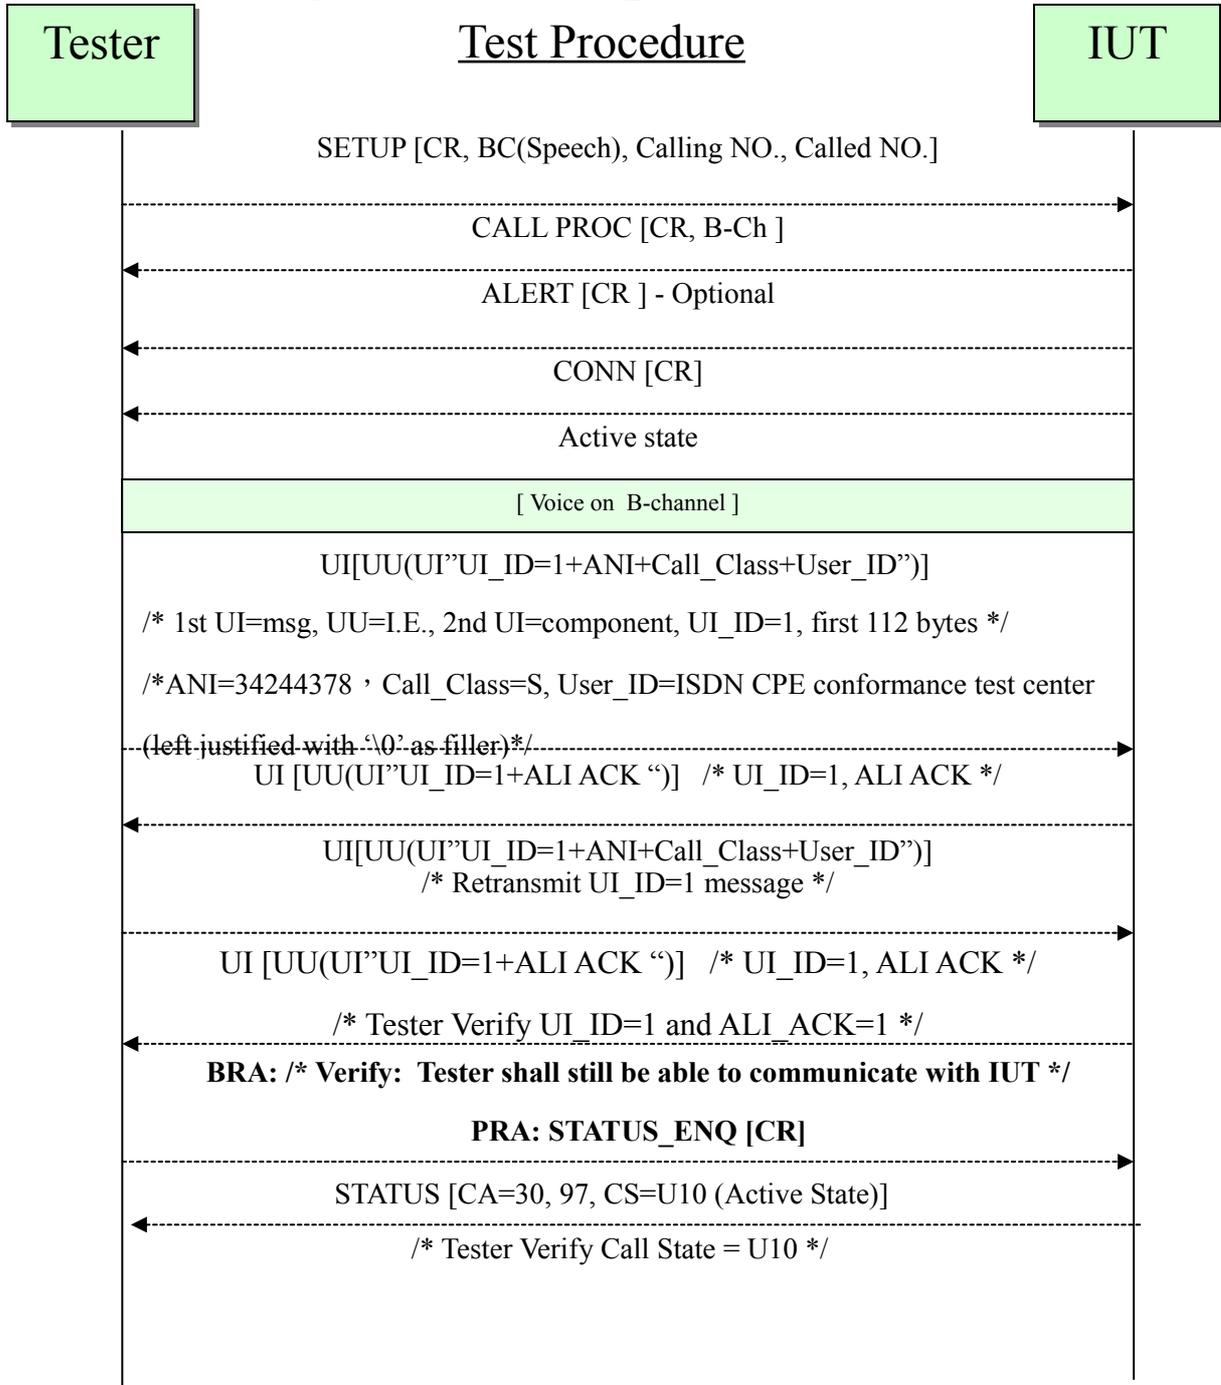

As follows:

Test Group: ANI/ALI

Test Id: UI_2

Test Purpose: Ensure that on receipt of a retransmitted UI(UI_ID=1) message the IUT responds with UI (ACK UI_ID=1) and remains in U10 state

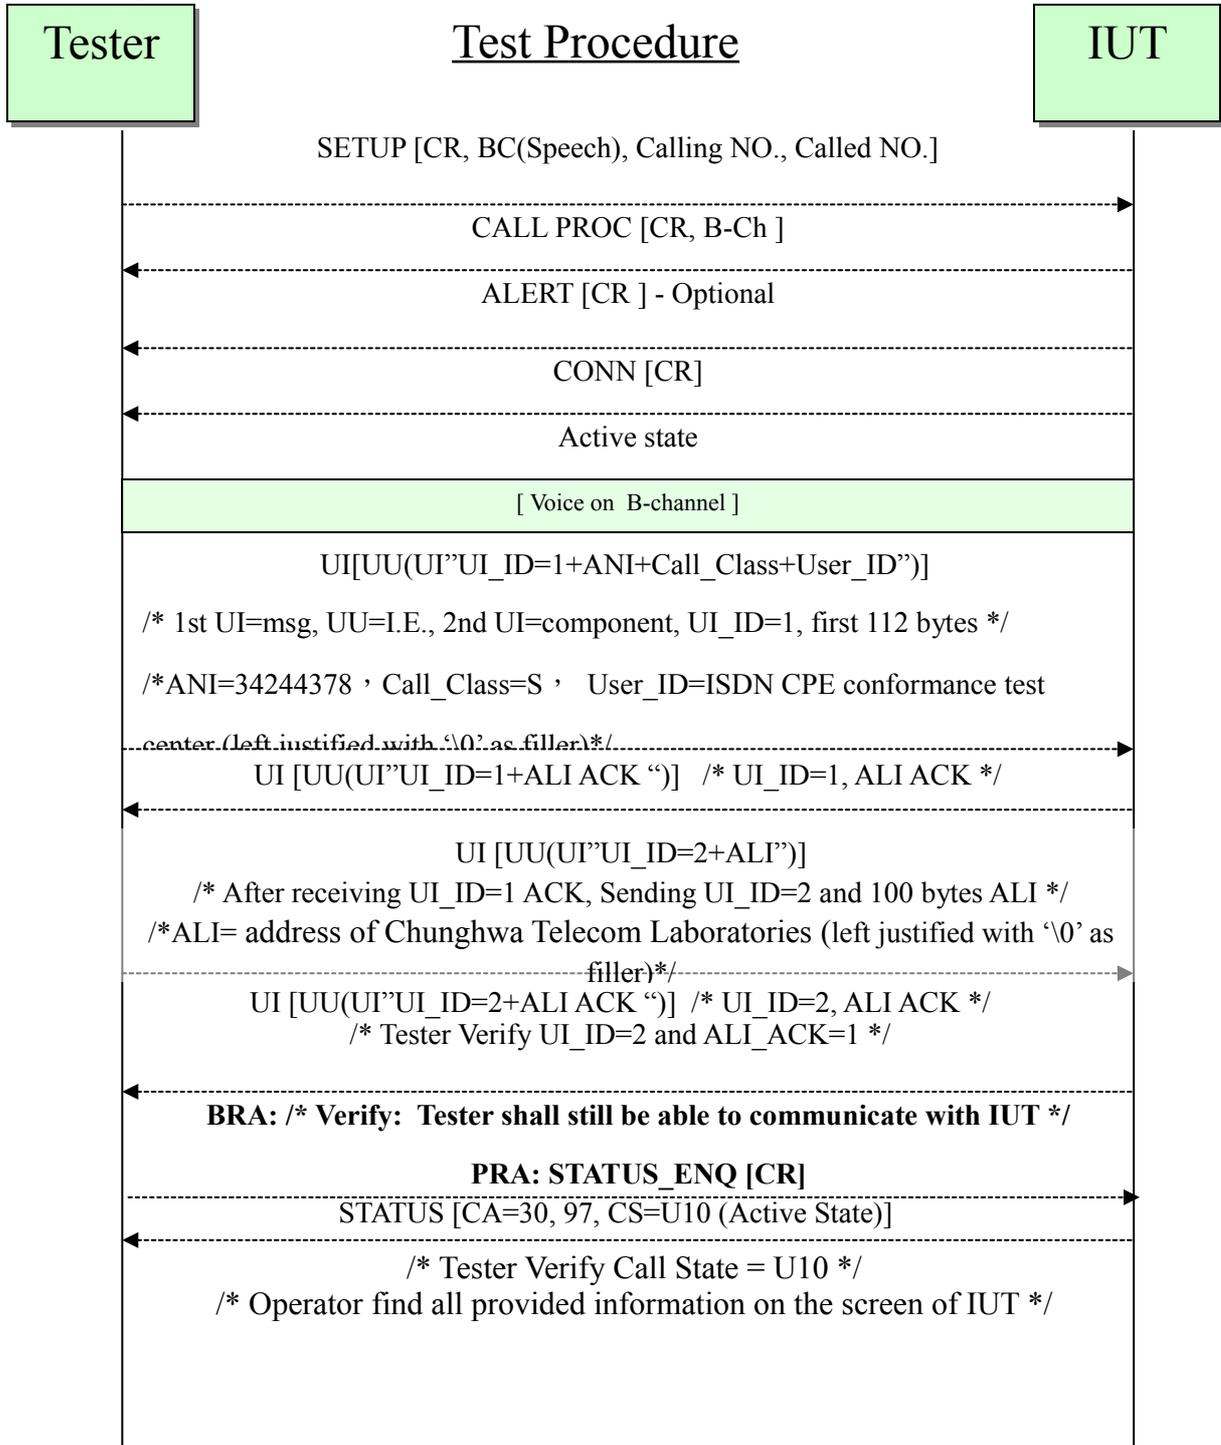

Test Group: ANI/ALI

Test Id: UI_3

Test Purpose: Ensure that on receipt of a UI(UI_ID=2) message the IUT responds with UI(ACK UI_ID=2), remains in U10 state and Displays all the provided information
